

## | RESEARCH STUDENT AGREEMENT

*To be completed by the student researcher.*

Students seeking to enroll in Neurosc 4998 must submit this "Student Agreement" to the online application by the Friday BEFORE the first week of the semester. Such research experiences must be unpaid.

By submitting this application for Neurosc 4998 research credit, I understand and agree to the following:

1. Your research experience will occur during the semester in which you are applying for credit. Credit is NOT given to research experiences that are already finished. Deferred credit is NOT available.
2. You will use this research application ONLY to apply for course credit in Neuroscience at The Ohio State University. Your research supervisor/PI might require you to fill out an additional application.
3. You will not be added to Neurosc 4998 if the addition of those credit hours puts you over the 18 hours maximum load permitted by the university (unless you successfully petition Arts and Sciences to add credit beyond the max of 18.) Please check your course schedule before submitting this application to make certain that adding 1-3 credits will not take you over 18 hours which can result in increased tuition.
4. Neurosc 4998 is repeatable up to a maximum of 6 hours, and counts as upper division credit in the College of Arts and Sciences. Up to 3 hours from 4998 can count as one class toward the Breadth Requirements for a Neuroscience Major.
5. Your research job responsibilities must be neuroscience-related. This course is meant to extend the in-classroom experience of neuroscience to the field-based application of neuroscience theories and practices.
6. You must work the equivalent of the hours specified in this application.
7. All hours must be completed by week 14 of AU/SP and by week 7 of SU.
8. As a student and representative of The Ohio State University, you are required to abide by the university's Student Code of Conduct (found here <http://studentaffairs.osu.edu/csc/>) during the entirety of your internship. This applies to internships off-campus, as well.
9. You must immediately notify a Neuroscience Academic Advisor of any problems or concerns that arise with the research experiences. You also must notify a Neuroscience Academic Advisor immediately if you are unable to fulfill the research duties, hours requirement, and/or if you drop the course.
10. I understand that failure on my part to complete any of the requirements in a timely manner will result in the assignment of an unsatisfactory grade.
11. Academic credit will be awarded
  - a. Based on satisfactory fulfillment of conditions listed in this agreement
  - b. Satisfactory performance as signed off by your supervisor
  - c. The completion of an Exit Survey provided by the Neuroscience Department, due by the last day of classes in the term for which credit is applied.
12. Approval/denial of any research application for any reason is at the discretion of the Neuroscience Undergraduate Program and within 5 working days of the application being submitted. Experiences
